- ~ IOTA

ABOUT BLOCK PARTY:

There's a plethora of different cryptocurrencies currently available with more being added each day. It's difficult to keep accurate track of your money, even more so if you own a variety of currencies. Block Party aims to solve that by providing an application to record your coin's activity, help make key decisions by supplying analytical tools, and give current information about the blockchain. The goal of Block Party is to make owning cryptocurrency manageable and efficient so you can focus on what you do with your money.

HOW IT WORKS:

Using an innovative blockchain API, Block Party collects information from the coin exchanges about different currencies and matches them to the information entered in the application. It then creates a portfolio with your data and displays graphs, charts, and statistics reflective of the inputted data and current trends.
